FREE PUBLIC LECTURE

Coming Clean

IS A NEW REVOLUTION IN SANITATION NEEDED TO ACHIEVE SUSTAINABLE LIVING?

We use it every day – usually more than once. It's a convenience we take for granted, yet couldn't imagine being without – the humble flushable toilet. But this barely mentionable essential comes at a significant cost in resources, infrastructure and impact on environmental ecosystems.

This fascinating public lecture details the challenges facing Australia in maintaining the highest standards in sanitation. It also reveals the opportunities for a revolution in managing our waste while conserving water, essential nutrients and our precious environment.

When
Wednesday 11 July 2007
6pm drinks for 6.30pm start

Where
University Hall
UTS Science Building
745 Harris Street Ultimo
(diagonally opposite ABC headquarters)

Free Parking
Peter Johnson Building
basement carpark
702-730 Harris St, Ultimo

CYNTHIA MITCHELL

Associate Professor Cynthia Mitchell is a Research Director at the UTS Institute for Sustainable Futures. Her work challenges current thinking, in technical and socio-cultural terms, when finding sustainable solutions to major infrastructure problems, in particular, water cycle management in industrial and urban settings. Cynthia has consulted widely to industry and government, won important Australian Research Council funding for her wetlands work and was recently awarded an Honorary Doctorate by the Chalmers University of Technology in Sweden.

UTS:MCU / JOB 12048 / JUNE 2007 / UTS CRICOS PROVIDER CODE: 00099F

UTSPEAKS: is a free public lecture series presented by UTS experts discussing a range of important issues confronting contemporary Australia
