

Women in STEMM

UTS-VNU JTIRC Post-Doctoral Research Fellows

The UTS-VNU Joint Technology and Innovation Research Centre is now recruiting two Postdoc Research Fellows to work under the Centre in Hanoi, and we strongly encourage women to apply for these positions.

For the full position description, including key focus areas and candidate profile, please [click here](#) or visit <http://jtirc.uet.vnu.edu.vn/2019/07/02/call-for-postdoc-position/>

The UTS-VNU JTIRC, launched in 2017, was the first partnership of its kind between Australia and Vietnam. It fosters excellence in research collaboration and technology transfer through PhD training, expert exchange programs and industry engagement.

UTS has a target for 40% of academic positions in STEMM to be filled by women by 2022. The UTS Faculty of Engineering and IT actively inspires women to embrace opportunity and engages them to fulfill their potential in STEMM related fields.

The UTS-VNU JTIRC is committed to this initiative, which aligns with the Vietnam National Strategy on Gender Equality, and strongly supports the career development of women in academia.

Are you a female working in one of the key focus areas? Do you think you fit the candidate profile? If so, we strongly encourage you to apply.

If you know a great female candidate, we urge you to nominate her, or encourage her to apply.
