Stress

Why is word stress important?
Stress is one of the most important speech tools used by English speakers to communicate meaning. English speakers use stress to highlight information they think is important. In addition, every English word with more than one syllable or word part has a defined stress pattern. That is, you can look up a dictionary to see which syllable is stressed. English stress is as important as English sounds.

How does it work?
The English stress system is based on the CONTRAST between stressed and unstressed syllables, stressed and unstressed words. Stressed syllables are longer and louder than unstressed syllables. They also have some pitch change or movement of the voice up or down.

Basically, there are three levels of stress in English:

- **syllable stress in words**
  - contrast between stressed and unstressed syllables in words
  - eg many people believe

- **key word stress**
  - stress in longer speech chunks, clauses or sentences
  - eg / that in an increasingly globalised world /

- **focus word stress**
  - the syllable in the stressed word which has the strongest pitch change in a speech chunk
  - eg / that in an increasingly globalised world /

What will happen if I don’t use stress?
You may sabotage your communication and you may risk tiring and confusing listeners. Listeners may not be able to recognise even simple vocabulary if you stress syllables equally or use incorrect word stress. Listeners may not follow your meaning if you don’t stress key words in information chunks.

Stress is essential for presenting key information clearly. Stressing information words at the end of a sentence or a speech chunk is also important because this is where new information often occurs in English.
Word Stress

Important

• • • •

or

• • •

Only one way to stress a word

• Stressed syllables tend to be higher, longer and louder than unstressed syllables.
• Listeners generally perceive loudness more than anything else;
• Acoustic analysis registers pitch more.
• They also have full, clear vowels
• In Unstressed syllables the vowel is usually shortened or pronounced as a neutral vowel

Eg. teacher

Exceptions:

There are only a few words in English whose word stress varies according to dialect or speaker.

i. conTROversy  ii. CONtroversy
ii. kiLOmetre  ii. KILometre
iii. CANberra  iii. CanBERra

<table>
<thead>
<tr>

Word Stress

Two syllable words:

<table>
<thead>
<tr>
<th>part of speech</th>
<th>1st syllable</th>
<th>2nd syllable</th>
</tr>
</thead>
<tbody>
<tr>
<td>nouns</td>
<td>90%</td>
<td>10%</td>
</tr>
<tr>
<td>verbs</td>
<td>40%</td>
<td>60%</td>
</tr>
<tr>
<td>Total words</td>
<td>80%</td>
<td>20%</td>
</tr>
</tbody>
</table>

Nouns occupy a greater proportion of our speech than do verbs, and consequently contribute to total distribution falling strongly in favour of first syllable stress.

Why 1st syllable?
- reflects the Anglo-Saxon basis of the English language.
- Norman French integration into English from the Middle Ages added syllable-final stress. Still maintained in some nouns in British and Australian English:
  - hotel, address
- Native speakers may find it difficult to perceive, because it is automatic.
- Word stress is always indicated in a dictionary:
  - e’lectric, re’lation, and pre’senting.
  - eLECtric, reLAtion, preSENting (books and teching resources)

People’s names and titles
Stress surname, rather than first name or title.

Dusty SPRINGfield, Patrick WHITE, Doctor JONES, Lady GAgA,

English place names
Stress is always on the first syllable for English place names in English-speaking countries, except those names beginning with North, South, East or West.
Eg. North Sydney; West Gosford

This rule will not apply to place names which are derived from other languages - such as French, Spanish, Aboriginal languages.
Eg. Turramurra; St Ives; La Perouse
Ask 3 students what suburb they live in – which syllable is stressed?

Forman, R. 2011. ‘Module 5: Phonemic Level’. UTS Subject 013107, UTS, Sydney
Other Languages and Word Stress?

- Many East and South East Asian languages are mostly monosyllabic (one syllable words) – eg. Chinese, Vietnamese
- Others which have polysyllabic words as well give equal weight to all syllables – Thai, Lao, Khmer, Indonesian/Malay, Japanese and Korean.
- European languages tend to use stress, but almost always in a regular and predictable position.
  - German, Dutch, Czech and Finnish
    - Stress on 1st syllable (except with prefixes)
  - French, Turkish and Persian (Farsi)
    - Stress on final syllable
  - Spanish, Italian and Polish
    - Stress on penultimate (2nd last)

Word Stress

HELPS Pronunciation Fact Sheet

Summary of common word stress patterns

1. Two - syllable words

<table>
<thead>
<tr>
<th>nouns and adjectives</th>
<th>verbs</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>O o</strong></td>
<td><strong>O o</strong></td>
</tr>
<tr>
<td>re cord (n)</td>
<td>re cord (v)</td>
</tr>
<tr>
<td>pro duce (n)</td>
<td>pro duce (v)</td>
</tr>
<tr>
<td>per fect (adj)</td>
<td>per fect (v)</td>
</tr>
</tbody>
</table>

2. Suffix words: pattern 1

<table>
<thead>
<tr>
<th>- sion</th>
<th>vi sion</th>
<th>- cy</th>
<th>demo cra cy</th>
</tr>
</thead>
<tbody>
<tr>
<td>- tion</td>
<td>solu tion</td>
<td>- ty</td>
<td>u ni ty</td>
</tr>
<tr>
<td>- ssion</td>
<td>emi ssion</td>
<td>- phy</td>
<td>geo gra phy</td>
</tr>
<tr>
<td>- cian</td>
<td>musi cian</td>
<td>- gy</td>
<td>physio lo gy</td>
</tr>
<tr>
<td>- ic</td>
<td>econo mic</td>
<td>- al</td>
<td>me di cal</td>
</tr>
</tbody>
</table>

3. Suffix words: pattern 2

<table>
<thead>
<tr>
<th>O o o</th>
</tr>
</thead>
</table>

4. Primary and secondary stress in multisyllabic words

Many longer technical words have more than one stressed syllable. Many have a prefix and this usually has secondary stress.

prefix with secondary stress → primary stress ↓

<table>
<thead>
<tr>
<th>anti bi o tic</th>
</tr>
</thead>
<tbody>
<tr>
<td>super vi sion</td>
</tr>
</tbody>
</table>

← suffix with no stress

5. Compound nouns

The most common stress pattern is stress on the first word, but there are exceptions.

- stress on first word: podcast, climate change, data base, think tank, run-up
- stress on second word: Information technology, global warming, social security

Word Stress

Word stress worksheet  Practising word stress patterns

In English, key vocabulary, or words that provide information to the listener, such as nouns, adjectives, verbs and adverbs, are usually stressed. In addition, words of two or more syllables have one syllable which has the main stress and it is very important to get this right if you wish to be understood.

This worksheet will give you practice in using word stress correctly.

You can refer to the Fact Sheet, *Summary of common word stress patterns*, and check the word stress with a dictionary when completing this worksheet.

Stress patterns in 2-syllable words

Look at the following phrases from Kofi Annan’s speech and the stress patterns of the 2-syllable words.

<table>
<thead>
<tr>
<th>Pattern 1</th>
<th>Pattern 2</th>
<th>Mixed 1 and 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>O o fellow human beings</td>
<td>o O survive</td>
<td>struggle to survive</td>
</tr>
</tbody>
</table>

Task 1

Put the following words into one of the two columns, according to their stress pattern. You will find that the stress pattern will vary according to what part of speech the word is a noun (n), verb (v) or adjective (adj). Then practise saying the words.

- event (n)
- recall (n)
- project (n)
- cancel (v)
- recall (n)
- project (v)
- reform (n/v)
- audit (n/v)
- minute (n/adj)
- dispute (n/v)

<table>
<thead>
<tr>
<th>O o</th>
<th>o O</th>
</tr>

<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Word Stress

**Stress in multisyllabic words**
As explained in the fact sheet, multisyllabic words can have primary and secondary stress, especially if they have a prefix as in *unemployment*.

**Task 2**
Mark the primary and secondary stress in the following words with /1/ for primary stress and /2/ for secondary stress:

- compromise
- reconstruction
- recyclable
- biological
- integration
- guarantee
- expectation
- individual
- European

**Task 3**
Below are some presentation topics that students have been asked to speak on. All words are key words and should be stressed but you need to check the syllable stress before stating your topic. Mark the stress, then say the topics.

i) Environmental emissions  
ii) Successful negotiations  
iii) Indigenous health issues  
iv) Infrastructure projects  
v) Statistical methods  
vi) Economic decision-making

Schwa

This is the most common vowel in English because it is used in syllables that are unstressed.

eg. the vowel in the last syllable of the word ‘Important’

or

‘I want to go’ the vowel in the word ‘to’ is pronounced as schwa because it is an unstressed word.

Schwa is NEVER in a stressed syllable.

Its use in connected speech is an important part of the rhythm of spoken English.

It is also very difficult to many learners, not because it is difficult to say, but because they do not realise how many syllables are unstressed in English.

When you don’t use schwa appropriately in unstressed syllables, it can sound as if every syllable is stressed.

Example:

*It’s very difficult for learners of English to master the pronunciation of schwa.*

*It’s very difficult for learners of English to master the pronunciation of schwa.*

Clarity English offers you online language support. It is free for all UTS students through the UTS Library. Go to http://www.lib.uts.edu.au/help/english-language and follow the links.

The following exercises on word stress are taken from Clarity English – Clear Pronunciation 2.

Listen to the words then tick the answer with the correct stress.

1. really A: really B: really
2. report A: report B: report
3. remember A: remember B: remember C: remember
4. yesterday A: yesterday B: yesterday C: yesterday
5. exam A: exam B: exam
6. revision A: revision B: revision C: revision
7. difficult A: difficult B: difficult C: difficult
8. opinion A: opinion B: opinion C: opinion
9. possible A: possible B: possible C: possible
10. business A: business B: business C: business

Look at the bold words and underline those that have the stress on the FIRST syllable. Then watch the video and check your answers.

1. What’s the most recent movie you’ve seen?
2. Do you enjoy romantic comedies?
3. Who’s your favourite actor or actress?
4. Do you prefer eating popcorn or chocolate in the movies?
5. Is going to the movies expensive in your country?

Now ask your partner the same questions.
Stress Practice

Listen to the words below. In each group, three have the same stress pattern, and one is different. Tick the word that is different.

1. politics  interesting  sensible  develop
   4. introduction  photocopy  complicated  businesswoman

2. opinion  government  important  whenever
   5. ridiculous  technology  experience  sympathetic

3. kangaroo  instrument  interrupt  disappear
   6. application  entertainment  centimetre  fundamental

Listen to the sentences and look at the syllables in bold. Are the vowel sounds in those syllables weak or strong?

1. She promised to provide eggs for breakfast  Weak  Strong
2. Megan began swimming when she was seven  Weak  Strong
3. Put the potatoes and carrots into the pot  Weak  Strong
4. A modern car engine is a complex machine  Weak  Strong
5. She wants to become a better musician  Weak  Strong
6. Most musicians can play the piano  Weak  Strong
7. We had to measure the height of a mature apple tree  Weak  Strong
8. We expect you to do extra work before the exam  Weak  Strong

The following exercises on word stress are taken from Clarity English – Clear Pronunciation 2.

The suffixes –ion, -ic, -ical, -ial and –ity sometimes affect the stress on a word. Listen to each pair of words. When you add the suffix, does the stress stay on the same syllable or move to a different syllable? Write ‘same’ or ‘different’.

1. revise  revision
2. artist  artist
3. public  publicity
4. tropic  tropical
5. inform  information
6. minor  minority
7. practice practical
8. office  official
9. operate  operation
10. secure security
11. permit  permission
12. history  historical
13. celebrate celebration
14. Economy  economics
15. Essence  essential
16. Possible  possibility
17. Decide  decision
18. Technique  technical
19. Science  scientific
20. Describe  description
Frequently used Academic Words

For practice using these academic words, go to:

http://emedia.rmit.edu.au/learninglab/content/academic-word-list-tool

The Academic Word List (Averil Coxhead, 2000):
a list of 570 high-incidence and high-utility academic word families
for Secondary School, Higher Education, Career

There is a very important specialized vocabulary for learners intending to pursue academic studies in English at the secondary and post-secondary levels. The Academic Word List, compiled by Coxhead (2000), consists of 570 word families that are not in the most frequent 2,000 words of English but which occur reasonably frequently over a very wide range of academic texts. These 570 words are grouped into ten sublists that reflect word frequency and range. A word like analyze falls into Sublist 1, which contains the most frequent words, while the word adjacent falls into Sublist 10 which includes the least frequent (amongst this list of high incidence and high utility words). The following ten sublists contain the headwords of the families in the Academic Word List. In other words, the ten sublists contain the most frequent form of the word, more often a noun or verb form, although there may be one or more important related word forms. For example, the headword analyze would also include: analyze, analytic, analytically, and analytically in the word family.

The Academic Word List is not restricted to a specific field of study. That means that the words are useful for learners studying in disciplines as varied as literature, science, health, business, and law. This high utility academic word list does not contain technical words likely to appear in only one, specialized field of study such as amortization, petroglyph, onomatopoeia, or cartilage. Two-thirds of all academic English words come from Latin, French (through Latin), or Greek. Understandably, knowledge of the most high incidence and high utility academic words in English can significantly boost a student’s comprehension level of school-based reading material. Secondary students who are taught these high-utility academic words and routinely placed in contexts requiring their usage are likely to be able to master academic material with more confidence and efficiency, wasting less time and energy in guessing words or consulting dictionaries than those who are only equipped with the most basic 2000-3000 words that characterize ordinary conversation.
