Public Health System Nurses’ and Midwives’ (State) Award, June 2015 Wage Rates
KEY POINTS

What does the future of health careers look like?

• Nursing: Lots of opportunities in rural areas. Students are now being placed in rural areas more often and are thoroughly enjoying it.

• Midwifery: Huge demand for midwives overall. The average age of a midwife is 40-50 years, so this demand is predicted to increase.

• Health: Asia opening up opportunities, including combining more hospital care with primary health care and community care.

• Sport and Exercise: A huge majority of students study S&E to get into Physio, however only approximately 1/3 actually get into physio. There is lots of opportunities for students to work in rehab centres.
KEY POINTS

Why is Midwifery such a competitive course?

• Due to a lack of clinical placements.
• Our Director of Studies Rosemarie works tirelessly to maintain and gain more clinical placements.

How can students succeed in Sport and Exercise Science?

• Credit/Distinction average in subjects like Maths and the Sciences is recommended for students to really excel.

Are there international job prospects for Health students?

• Nursing and Midwifery students may need to complete bridging courses to be clinically eligible to work in another country.
• All UTS:Health students are encouraged to take up study abroad opportunities and financial assistance is provided for this.
